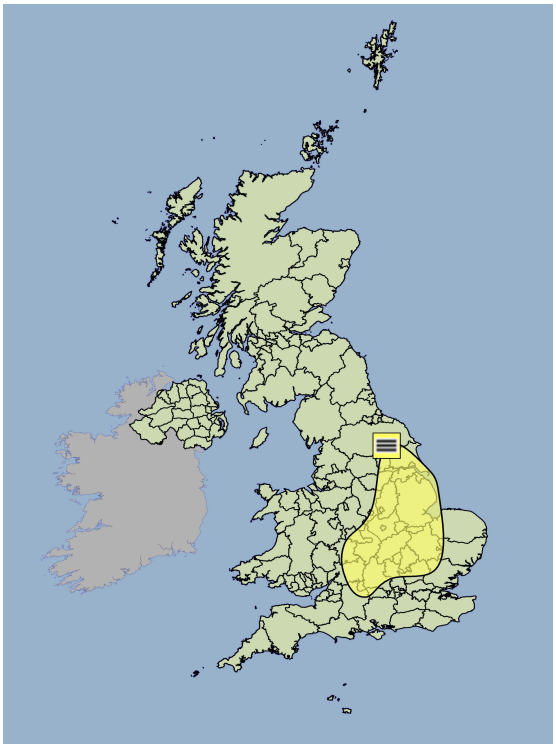
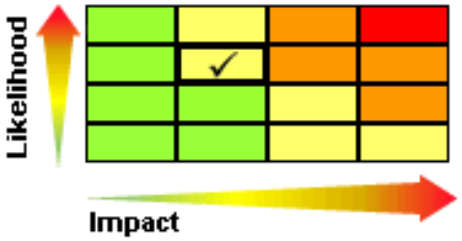
National Severe Weather Warning Service





Chief Forecasters Assessment
Areas of dense fog have formed quickly, especially over the northeast Midlands and Lincolnshire, and such conditions seem likely to crop up in other areas through the night and into the morning rush hour. However this is an awkward situation, with fog tending to come and go, and even some places outside the main risk area could be affected.

The Met Office have issued a **Yellow Warning** of **Fog**

Valid from **23:30 on Tue, 17th Mar 2015** until **09:00 on Wed, 18th Mar 2015**

Areas of fog, already dense across parts of eastern England, will affect some other central and eastern parts of England at times through the night and into Wednesday morning. The public should be aware of the prospect of some tricky conditions on the roads.
